

ADITYA MENGAR

Computer Engineering Student · Data · AI

Pune, Maharashtra, India · Portfolio: aditya-mengar.vercel.app

PROFILE

Computer Engineering student at AISSMS Institute of Information Technology (Savitribai Phule Pune University), building a technical foundation across data science, analytics and AI - learning the statistics properly, writing the SQL, and turning concepts into small, honest projects.

EDUCATION

B.Tech. Computer Engineering - Ongoing

AISSMS Institute of Information Technology, Savitribai Phule Pune University.

Core coursework across programming, data structures, mathematics and systems, with a personal focus on data science and AI.

SKILLS

Data & Analytics	Data Science · Data Analytics · Statistical Modeling · Linear Regression · Predictive Analytics
Programming / Technical	SQL · C
AI	AI Literacy (developing)

PROJECTS

AI + IoT Agricultural Monitoring *Concept · in exploration*

Exploring how AI and IoT-style monitoring could detect crop threats earlier, so protection becomes targeted instead of routine. Currently at the problem-definition and research stage: sensing/data architecture and proof-of-concept scoping.

Contribution: problem definition · AI/IoT monitoring research · early solution thinking.

Live 3D Portfolio Website *Live*

Designed and built a single-page, data-driven portfolio from scratch: React, TypeScript, Three.js (React Three Fiber), Tailwind CSS, Framer Motion. Real-time WebGL scenes, lazy-loaded 3D bundles, device-aware quality tiers, reduced-motion and WebGL fallbacks. Content lives in typed data files.

LEARNING & PROGRAMS

- Google Cloud Study Jam - hands-on cloud fundamentals (participation).
- IBM SkillsBuild - structured artificial intelligence learning track.
- Pregrad - technical learning programs across data and emerging technology.
- Study areas: Natural Language Processing, Computer Vision, Cybersecurity, Digital Productivity.
- Ongoing self-directed work in statistical modeling and analytics practice.

HOW I WORK

- Honest numbers beat impressive ones - nothing is claimed without measurement.
- Understand before automating - every model used is one I can explain in plain language.
- Ship, then refine - version one exists so version two has something to improve.
